ORACLE

# 3 Reasons to Move Retail Store Inventory Operations to the Cloud

Outdated technology can cause security and compliance risks and a poor user experience. Oracle Retail Store Inventory Operations Cloud Services offers real-time inventory visibility, efficient inventory management, and easy integration across your enterprise on a secure platform.

Common retail challenges

Outdated technology

Outdated systems lack flexibility, scalability, and integration capabilities with today's ecommerce, ERP, and fulfillment solutions, impeding adaptation to new business needs and market changes. As these systems become increasingly complex and costly to support, they strain IT resources and budgets.

Security and compliance risks

Retailers invest significant time and effort in building security processes around legacy on-premises applications and databases, yet still struggle to keep up with evolving data security and regulatory requirements.

A poor user experience

Traditional on-premises retail inventory systems suffer from data delays and lack integration between stores, warehouses, and corporate offices, resulting in inaccurate inventory records. Outdated user interfaces further contribute to a poor user experience.

How Oracle can help

A future-ready platform that scales

Oracle Retail Store Inventory Operations Cloud Services is designed to reduce TCO, quickly deliver automatic updates and new features, and let your business focus on strategic priorities. This future-ready platform helps your organization achieve greater efficiency and agility.

Robust security and compliance

With Oracle managing security, compliance, and system updates, your teams can focus on delivering better customer and associate experiences, driving growth, and honing your competitive advantage.

Intuitive UI and easy integration

Oracle Retail Store Inventory Operations Cloud Services provides real-time visibility into store inventory levels with its intuitive UI. Integration with POS, commerce, supply chain, and other applications keeps all touchpoints updated with accurate, timely information.

CRITICAL INSIGHTS

Oracle Retail Store Inventory Operations Cloud Services seamlessly integrates with the Oracle Retail suite to give retail teams a unified view of inventory across stores and warehouses.

Optimize your inventory operations for improved efficiency, agility, and service

Gain real-time inventory visibility and mobile inventory management with a future-ready platform for advanced omnichannel fulfillment so your teams can focus on customer service.
